

Project Design Phase
Proposed Solution Template

Date	9 June 2026
Team ID	
Project Name	ShopEZ
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Most people find it difficult to shop online because existing platforms are too complex and overwhelming. There was a need for a simple and clean e-commerce app where users can browse products by category, add to cart and place orders without any confusion.
2.	Idea / Solution description	ShopEZ is a full stack MERN e-commerce application. Users can register, login, browse products filtered by category, search by name, add items to cart and place orders. Admins have a separate dashboard to add, edit and delete products and view all orders.
3.	Novelty / Uniqueness	ShopEZ is built completely from scratch using the MERN stack without any e-commerce templates. The clean UI using Tailwind CSS, role based access control for admin and user, and the category filter system makes it stand out as a beginner friendly yet functional e-commerce platform.
4.	Social Impact / Customer Satisfaction	ShopEZ makes online shopping accessible and simple for everyday users. It reduces the frustration of navigating complex websites and gives small business owners an easy way to list and manage their products without needing any technical knowledge.
5.	Business Model (Revenue Model)	ShopEZ can generate revenue by charging a small commission on each

		order placed through the platform. In future it can also offer premium seller accounts where admins can list more products and get better visibility on the platform.
6.	Scalability of the Solution	The app is built with a decoupled frontend and backend which makes it easy to scale. The backend can be deployed on cloud platforms like Render or Railway and the frontend can be hosted on Vercel. MongoDB Atlas can replace the local database for production use. New features like payments, reviews and wishlist can be added without breaking existing functionality.
